

Class Week 2:-

Why functions?

(to avoid) lengthy - or Bulky - code.

- Not Reusing
- Buggy code ko htam k liye
- They provide readability

1) -

```
void printName(){  
    int n;  
    cout << "Enter value of n" << endl;  
    cin >> n;  
    for (int i=0; i<n; i++)  
        cout << "Akehat" << endl;  
}
```

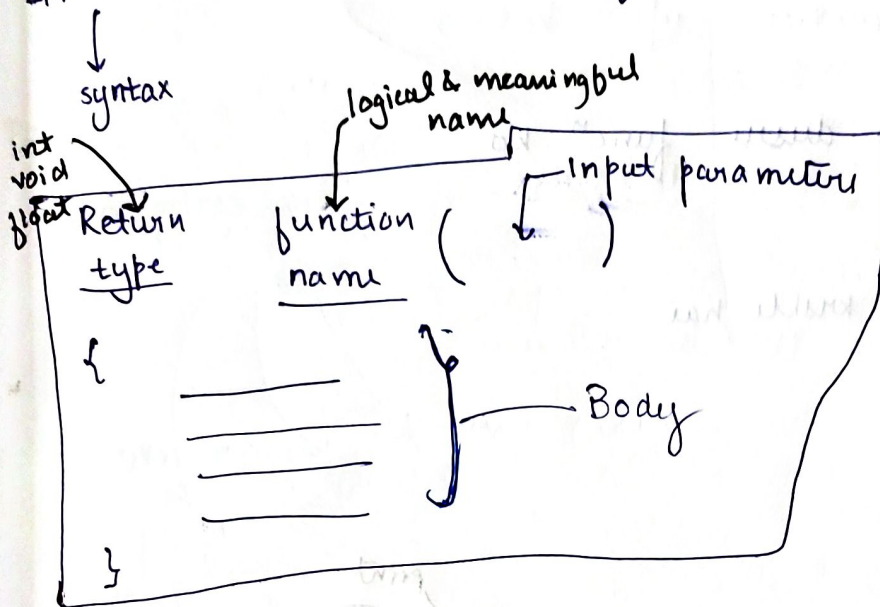

}

```
int main(){  
    // function call  
    printName();
```

```
    return 0;
```

}

Linked with a well defined task.

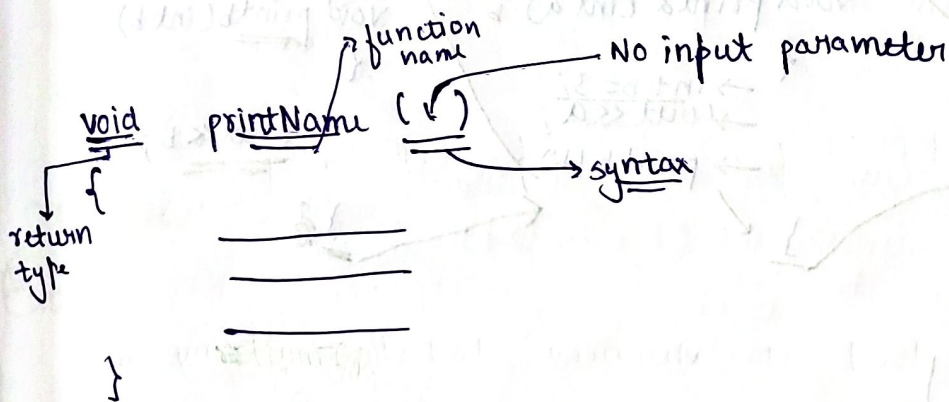

Exploration ↑

Spoonfeeding

0-1%

99%

int main()

{

return 0;

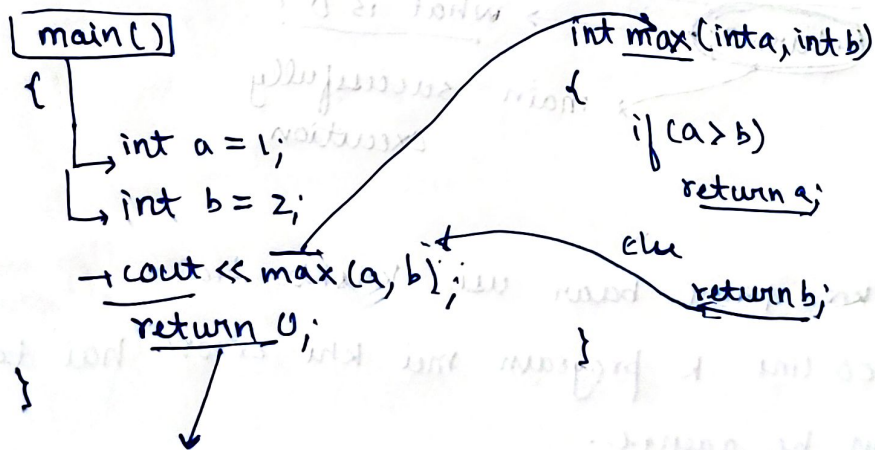

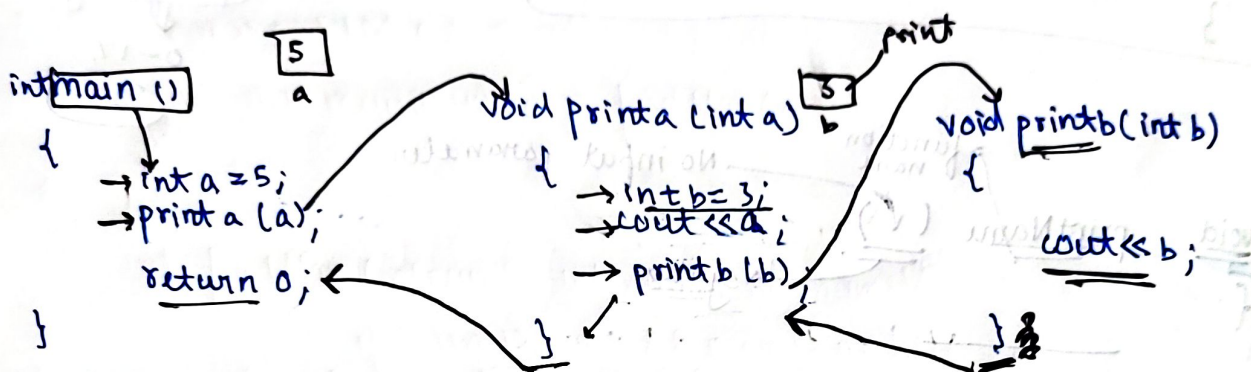

what is 0?

main successfully
execution

- Code ko baar baar use krsktte hain.
- Agr 100 line k program mei khi error hai toh , seedhe function pe aaenge.
- Readability ✓

Function call stack:-

- function call
- kis function ne dusre funcⁿ ko call kiya.
- function k kya krsktte hai

kisko
ja rha hai?
(Operating system)

→ function call or invoke same hota hai!

Pass by value → (copy create hoga) actual value pass nhi hogi

```
void printNumber (int num){  
    cout << num << endl;  
}
```

```
int main()  
{
```

```
    int num = 5;
```

```
    printNum(a);  
}
```

1) Function to add two Numbers.

```
int main(){  
    int a;  
    cout << "Enter value of a" << endl;  
    cin >> a;
```

```
    int b;
```

```
    cout << "Enter value of b" << endl;
```

```
    cin >> b;
```

```
    int sum = add(a, b);
```

```
    int main()  
    cout << sum << endl;
```

```
    return 0;
```

```
void printNumber(int num){  
    cout << num << endl;  
}
```

```
int add (int a, int b){
```

```
    int result = a + b;
```

```
    return result;  
}
```

O/P

Enter value of a: 3

Enter value of b: 4

7

7

result

Kisi bhi function ko call, invoke krne k liye us function ki declaration upar kahi ho.

2) Find max of three numbers.

```
findMax (int num1, int num2, int num3);
```

```
int main() {
```

```
int a, b, c;
```

```
cin >> a >> b >> c;
```

```
int maximumNumber = findMax(a, b, c);  
cout << maximumNumber;
```

```
int findMax (int num1, int num2, int num3) {
```

```
if (num1 > num2 && num1 > num3) {
```

```
cout <<
```

```
return num1;
```

```
}
```

```
else if (num2 > num1 && num2 > num3) {
```

```
return num2;
```

```
}
```

```
else {
```

```
return num3;
```

```
}
```

3) To write first N no.s .

```
void printCounting(int n){
    for(int i=0; i<=n; i++){
        cout<<i<<" ";
    }
    cout<<endl;
}

int main(){
    cout<<
    cin>>n;
    printCounting(n);
    return 0;
}
```

4) Grade Problem

```
char getGrade(int marks){
    if (marks >= 90)
        return 'A';
    else if (marks >= 80)
        return 'B';
    else if (marks >= 70)
        return 'C';
    else if (marks >= 60)
        return 'D';
    else
        return 'F';
}
```

```
int main() {
```

```
    int marks;
```

```
    cout <<
```

```
    cin >> marks;
```

```
    char finalGrade = getGrade(marks);
```

```
    cout << finalGrade << endl;
```

```
    return 0;
```

```
}
```

5) sum of first N even no.s.

```
int getsum(int n) {
```

```
    int sum = 0;
```

```
    for (int i = 2; i <= n; i++) {
```

```
int getEvenSum(int n) {
```

```
    int sum = 0;
```

```
    for (int i = 2; i <= n; i = i + 2) {
```

```
        int sum = sum + i;
```

```
    }
```

```
    return sum;
```

```
}
```

```
int main()
```

```
    int n;  
    cout << "Enter the value " << endl;  
    cin >> n;  
    int ans = getEvenSum(n);  
    cout << "Even sum is : " << endl;  
    return 0;
```

```
}
```

O/P

Enter value of n

10

Even sum is 30

% → operator heavy operation karta hai ,
